DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are indefinite because it is not clear what is referenced as "optimum water re supply amount". How the term "optimum" limits the claims.

Claims 2 and 3 are indefinite because it is not clear whether or not the re-supplying step recited by claim 2 is the same as re-supplying step of claim 1.

Claims 4-6 are indefinite because it is not clear how can the steps of sensing and calculating be repeated if the sensing step is required to be conducted at the specific time of the washing course and the calculating step is based on the sensing step.

Claim 7 is indefinite because the term "the water levels" lacks proper antecedent basis.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1746

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Kim et al teach a method as claimed. See columns 2 and 3 and detailed description of the method in columns 4-7.

Kim et al do not used the term “water reduction rate” but measuring number of “refills” in time is a measuring of the rate. It is noted that the instant claims do not specify what is referenced as “water reduction rate”. The disclosure of Kim et al meets the limitation of the not defined term “rate”.

It is noted that the calculations of Kim et al serve for the same purpose – to determine rate of water absorption in the laundry and determine washing settings based on the obtained data. See at least column 5, line 50 – column 6, line 4, wherein Kim et al use the term “water absorbing rate”.

Art Unit: 1746

Kim et al do not specifically state that the final water load (level) is greater than the level first set level, however, it is inherent because the steps S31-35 maintain the minimum water level. See at least column 5, line 43 – column 6, line 4.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 5,768,729, 6,634,191 and KR199-027766 are cited to show the state of the prior art with respect to washing methods.
